

I/I costs everyone!

Inflow and infiltration (I/I) is clear water that enters the wastewater system. It overloads the system and can cause costly sewer backups into homes and buildings.

Inflow is clear water that quickly enters the wastewater system after rainfall events from sources such as sewer cleanouts, sump pumps, gutters, building foundation drains, and broken maintenance hole covers.

Infiltration is clear water that gradually enters the wastewater system below ground through cracks and openings in sewer service lines and joints, and public sewer mains and deteriorated maintenance holes.
