Program 8099 – Crow River WRRF

Map showing location of future Crow River Water Resource Recovery Facility (WRRF) in Rogers

Description

This program provides funding for planning and implementation of a new Crow River WRRF located at 25940 141st Avenue North, Rogers, MN 55374 to replace the Rogers Wastewater Treatment Facility (WWTF). After commissioning the Crow River WRRF, the Rogers WWRF will be decommissioned, and the Rogers WWRF site will be returned to the City of Rogers. Planning work is documented in the Crow River WRRF Facility Plan (March 5, 2025).

Purpose and justification

The Crow River WRRF is needed to accommodate regional growth and free up capacity in the Elm Creek interceptor for urban core growth. The new site can accommodate expansion of the Crow River WRRF to serve 2050's projected growth in the communities of Rogers and portions of Dayton, Corcoran, and the surrounding area. A future project under a separate program will divert flow from the Elm Creek interceptor to this facility.

Program location

The active projects within this program are in the following Council districts: 1

Active projects in program

Project Number	Project Title
8099XX	TBD
